

**OPEN LETTER FROM CIVIL SOCIETY TO MARK DYBUL, EXECUTIVE
DIRECTOR OF THE GLOBAL FUND TO FIGHT AIDS, TUBERCULOSIS AND
MALARIA:
ABANDON THE “BLUE-RIBBON TASK FORCE TO DEVELOP A GLOBAL FRAMEWORK ON
TIERED-PRICING”**

Mark Dybul, Executive Director
The Global Fund to Fight AIDS, Tuberculosis and Malaria
Geneva Secretariat
Chemin de Blandonnet 8
1214 Vernier
Geneva, Switzerland

13 May 2014

Dear Dr. Dybul,

We, the undersigned organizations and activists from the global South and North, are writing to urge the Global Fund to abandon its attempt to launch a “blue-ribbon Task Force” that will focus primarily on developing a global multi-tiered pricing framework for middle-income countries (MICs), which we believe would permanently undermine access to more affordable medicines, vaccines and diagnostics for low- and middle-income countries.

The proposal is not only compromising the reputation of the organization and distracting global health agencies and governments from moving forward with better alternative strategies, it threatens to undermine the core mission and principles of the Global Fund, which has no mandate to lead a global price-setting process. While we hope that the Global Fund increases its efforts to ensure access to affordable medicines, it is deeply problematic that the Global Fund is prioritizing a policy that ultimately might justify needlessly high prices, including in middle-income countries where the Global Fund is reducing its financial assistance.

The proposal has been developed through an opaque, closed process. Since the blue-ribbon Task Force was first proposed at the end of 2013, no official information has been publicly disclosed. Governments and civil society have been excluded from discussions in spite of the central role that both play in ensuring affordability of medicines.

Several versions of the Global Fund’s concept note are now in the public domain.¹ Significant negative feedback from activists, public health experts and organizations has been already

¹ For example, Thiru Balasubramaniam’s blog - Resurrecting the Ghost of Høsbjør Past: Global Fund seeks to establish global framework on tiered pricing enforced by WTO rules, <http://keionline.org/node/1979>. Book Baker’s blog - Industry Led Tiered Pricing or Country Led, Real Equitable Access –the Global Fund’s Task Force Proposal Get Worse Instead of Better, <http://infojustice.org/wp-content/uploads/2014/03/Baker-Global-Fund-Tiered-Pricing-03282014.pdf>

shared.² Substantively, concerns have predominantly centered upon the initiative's primary focus on industry-driven tiered pricing strategies³ in lieu of proven strategies to promote robust generic competition. Voluntary strategies proffered by industry to lower the prices of medicines are insufficient and often limited in scale, many times excluding patients living in countries considered to be "middle-income economies" where pharmaceutical companies seek future high profits. Analyses of tiered pricing have concluded that the strategy has damaging consequences for access to medicines because it leads to supra-competitive prices, fosters inequity, and lacks sustainability in the long run.⁴

Not only would a set of global norms on tiered pricing – improvidently endorsed by public health agencies – be the wrong strategy to promote access to medicines, such an approach may also undermine more promising efforts, including: use of TRIPS flexibilities; promotion of competition; use of price negotiations and price controls; and the search for regional and global strategies, like proposals to de-link research and development (R&D) costs from product prices.

We agree with many of the public health concerns expressed in the concept paper. We agree that there is a long-standing access to medicines crisis in both low- and middle-income countries. Many middle-income countries face both a funding and affordability crisis due to graduation from low- to middle-income status and to the full implementation of the WTO TRIPS Agreement – the impacts of which are being felt through ever-higher prices for medicines, vaccines and other medical technologies. We also agree that World Bank economic classifications of countries have little relation to public health needs of countries' populations and their capacity to pay unilaterally imposed prices. In fact, most of today's poor live in countries considered to be middle-income economies.

However, the proposed "blue-ribbon Task Force" – rather than identifying solutions that overcome the limitations of current approaches – is seeking primarily to validate and institutionalize a single failed strategy.

We therefore urge the Global Fund to:

- a) Abandon the blue-ribbon Task Force and tiered pricing initiative in light of the evidence of the ineffectiveness of tiered pricing and the broad concerns voiced by public health experts, civil society, and increasingly, governments.
- b) Join ongoing government-driven efforts at the global, national and regional level, including the implementation of the WHO Global Strategy and Plan of Action on Public Health, Innovation and Intellectual Property. Instead of creating parallel processes, the Global Fund should use its resources – institutional, political and technical – to play a positive role to improve

² For example, Letter to Mark Dybul by activists following up on meeting held at ICASA on 9th December 2013,

<https://groups.yahoo.com/neo/groups/internationaltreatmentpreparedness/conversations/topics/24403>

³ Tiered pricing, sometimes also called "differential pricing", refers to the practice of some pharmaceutical companies unilaterally setting discounted prices for certain developing countries based on arbitrary criteria such as World Bank income tier.

⁴ For an overview of the public health challenges with tiered-pricing: A win-win solution?: A critical analysis of tiered pricing to improve access to medicines in developing countries (2011, Moon et al), <http://www.globalizationandhealth.com/content/7/1/39>

affordability of medical tools. For example, the Global Fund should lend its full weight to assist all developing countries, including those countries that no longer receive financial support from Global Fund, to improve affordability of medicines, including through the use of TRIPS flexibilities and other measures that promote robust generic competition.

c) Raise the challenges of access to medicines and other medical technologies for low and middle-income countries at the upcoming May 2014 World Health Assembly, by sharing pricing information from Global Fund recipients and the difficulties the Global Fund faces in bringing the cost of medicines down and supporting civil society's demand to further expand access to treatment through all proven interventions for all in need.

We thank you for your attention and look forward to discussing further with you.
