How Civil Society and Communities Can Engage in the Global Fund Grant-making Processes
Introduction

This information note is an update of the alert prepared by ICASO in 2015 to provide advice to civil society and community groups on how to engage in grant-making activities once a funding request has been developed. Following the submission of a funding request to the Global Fund, there continues to be a critical role for communities and civil society to play. This information note describes the steps involved in moving from a funding request to a signed grant. It recommends entry points, resources, and technical assistance available to support communities and civil society during this phase. This information will be of interest to community and civil society representatives on Country Coordinating Mechanisms (CCMs) as well as disease-specific non-governmental organizations (NGOs), vulnerable and key population networks, gender and human right activists, and other groups that participated in the funding request development process.

The concept of differentiation was introduced as an ‘enabler’ in the 2017-2022 Global Fund Strategy. Among other things, differentiation calls on the Fund to simplify its processes and ensure they are more tailored to the current needs and conditions of each country. The initiative also allocates Secretariat financial and human resources based on where the attention is most needed and where it will have the greatest impact on health outcomes. The new country categories are:

- **Focused**: These are composed of smaller portfolios from countries with lower disease burden and lower risk.
- **Core**: Includes larger portfolios from countries with higher disease burdens and higher risk.
- **High Impact**: These countries have very large portfolios with critical disease burden.

There are also two cross-cutting classifications: Challenging Operating Environments: countries, regions, or areas that require special flexibilities due to elevated risk or instability, and countries transitioning away from Global Fund support.

---

2 Key affected and vulnerable populations are often context-specific. The Global Fund defines key populations as having the following characteristics: the population experiences increased risk, vulnerability, or burden of disease due to a combination of biological, socio-economic, and structural factors; access to health services that prevent, diagnose, treat, or care for these diseases is significantly lower than for the rest of the population; and the population experiences frequent human rights violations, systematic disenfranchisement, social and economic marginalisation, and criminalisation. See Global Fund to Fight AIDS, Tuberculosis and Malaria (Global Fund), “Community Systems Strengthening Information Note,” accessed April 16, 2011, [https://www.theglobalfund.org/media/1259/core_css_infonote_en.pdf](https://www.theglobalfund.org/media/1259/core_css_infonote_en.pdf).

The 2017-2019 funding cycle also introduced a differentiated funding application process whereby countries were recommended to access funding through one of three different funding application approaches, with varying degrees of complexity based on several factors including program size, complexity, and risk. The three approaches are summarized below:

- **Program continuation**: country components with fewer than two years of implementation or with demonstrated performance and no material change.

- **Tailored review**: specifically designed for four different circumstances: country components only requiring defined material change, programs preparing for transition out of Global Fund support (thirteen countries), challenging operating environments, and countries identified for innovative approaches such as national strategy-based pilots.  

- **Full review**: country components requiring thorough review, and country components not reviewed by the independent panel of experts referred to as the Technical Review Panel (TRP) in the previous allocation period.  

The opportunities for civil society and community groups to engage in grant-making activities remain more or less the same despite the assigned application modality. As indicated below, the intensity of the TRP review will differ. For countries applying through the Program Continuation stream, the TRP will simply validate that there are no material changes since the last funding, or no material changes are needed for the program. Countries applying through the tailored or full proposal application modality will have a tailored or full TRP review.

---

**Program Continuation:**

- Secretariat screening
- CCM request
- TRP validation

**Full proposal**

- Material change
- Transition
- COE
- NSP

**Differentiated Application and Review Approaches**

- TRP full review
- TRP tailored review

**Grant Making**

- GAC Recommendation
- Board Approval

---

Technical Review Panel (TRP) and Grant Approvals Committee (GAC) Reviews

The Global Fund approach calls for an iterative funding request development process to improve the quality of the grants and ensure that programming focuses on the interventions that are most relevant and would have the most impact. Once submitted, funding requests are reviewed by the Global Fund Secretariat to determine if the country meets the Country Coordinating Mechanism (CCM) eligibility requirements and that the documentation submitted is complete. If the country has not met CCM eligibility requirements, the proposal will be returned to the country with advice about what steps need to be taken to meet these criteria. The CCM must prove that they engaged in a transparent and inclusive funding request development process and that an open and transparent Principal Recipient (PR) selection process was used. Principal Recipients are responsible for grant implementation, monitoring, financial management, procurement, and technical coordination. The PR selects and supervises Sub-Recipients (SRs), which are responsible for the bulk of the program implementation.

When the Secretariat has confirmed that the funding request is complete and the country has met the CCM eligibility requirements, it is submitted to the TRP. The TRP assesses the funding request for strategic focus, technical soundness, and potential for impact in accordance with the Global Fund strategy. The TRP may ask for clarifications or recommend adjustments to the proposal, or it may request that the funding request be revised by the CCM and resubmitted at another TRP review window. In some cases, the funding request will also be reviewed by the GAC prior to grant-making. This step is likely when a matching funds application is being reviewed, and in exceptional circumstances, such as when a government fails to meet commitments it made in the previous allocation period.

Countries are required to include with their funding application a list of any priority interventions that could not be funded due to limited resources within the allocated funding. The Prioritized Above Allocation Request (PAAR) is reviewed by the TRP so that strategically focused and technically sound interventions can be registered as unfunded quality demand (UQD). If additional resources become available during the allocation period, these funds will be allocated to activities in the Register of Unfunded Quality Demand. The following diagram illustrates this concept.

---

8 A Principal Recipient (PR) is the main implementing organization for Global Fund programming. PRs can be government, NGO, or private sector entities. While they are accountable to the CCM, PRs have a contractual arrangement with the Global Fund.

When the TRP is satisfied with a proposal, the Secretariat will begin the grant-making process with the Principal Recipient(s). The Secretariat and the PR will develop and agree on key documents as discussed below. When the details of the grant are finalized with the PR, the funding request will be reviewed by the Grant Approvals Committee (GAC). This committee may seek additional clarifications and set certain conditions to be addressed before the grant is signed. The GAC will also confirm the level of unfunded quality demand. Following (GAC) approval, the grant will be submitted to the Global Fund Board for approval.

---

11 The GAC is made up of senior Global Fund staff, with non-voting input from technical partners such as UNAIDS and WHO and civil society.

Grant-making: The Devil is in the Details

Once a proposal is reviewed by the TRP and their recommendations have been shared with the country, the Secretariat spends the next three to five months completing the exhaustive steps to produce a grant agreement. The process can take longer, which is not always a problem, since this work often results in better programming. The downside, however, is that a delay in concluding negotiations may require a grant extension, which is extra work for the PR and Secretariat and eats into the allocation utilization in both time and money. The CCM continues to oversee this process, but detailed discussions are held between the Global Fund Secretariat and the PR. Most of the grant documents that are negotiated during grant-making are initiated during the funding request stage. During grant-making, the objective is to negotiate these documents to arrive at finalized grant documents, which form the basis of the grant agreement. To support this process, the Global Fund has developed a number of templates and forms for the PR to complete. The tools used to develop the work plan, budget, and monitoring and evaluation (M&E) framework are described in Appendix A. Technical partners and the local fund agent (LFA) may be involved in supporting this work.

The grant-making phase can be viewed as a window of opportunity to get the right interventions into the grant. Communities and civil society have a very important role to play in monitoring the process and ensuring that the final contract between the PR and the Global Fund reflects the strategies, approaches, and priorities specified in the funding request. The starting place is the Review and Recommendation Form, which summarizes the TRP/GAC comments that need to be addressed before the grant agreement can be signed. The Secretariat sends this document confidentially to the CCM, so civil society members on the CCM will be able to access it. The form asks questions and makes recommendations to improve the grant and has often called for changes in community, rights, and gender programming. Examples of issues identified could include the need to: increase community participation in TB clinics and case detection, reassess population estimates and refocus programming targets for key populations, or develop a community strengthening intervention to support community monitoring for accountability. These recommendations are a great entry point for communities and civil society to push for changes and adjustments to improve programming. CCMs and PRs are motivated to fix problems identified by the TRP or GAC and will welcome your advice.

One area that will be discussed during grant-making that is very relevant to the success of the project is the selection of Sub-Recipients (SRs). It is helpful if communities and civil society can monitor the process to ensure criteria, timing, and selection of SRs is transparent and well-publicised and that self-promotion or lobbying by interested parties is kept in check.

13 The Secretariat is represented by either a country team that is made up of a lead fund portfolio manager (FPM) supported by representatives from finance, legal, and M&E departments, or, in the case of smaller grants, by an FPM supported by program officers.
14 Core documents prepared during the funding request phase and further developed in grant-making are: performance framework, work plan and budget, programmatic gap tables and funding landscape tables, and a list of health products with assumptions and quantities.
It is important to note that by the time the funding request has come back from the TRP review it may be too late to make any major changes to the original programming focus. It is important to pick your battles and work strategically by providing advice that will shape the grant to make sure interventions that are most important and promise the most impact are funded and implemented.

Much of the work during the grant-making stage will be quite detailed and not everyone will have the time or inclination to be involved in this work. However, as with the work to develop the funding request, civil society is well-served by coming together to decide on an approach and divide the grant-making oversight tasks among willing participants. Those closest to the negotiations will be the community and civil society representatives on the CCM and civil society PRs and SRs. These representatives should reach out to their colleagues, particularly those who took part in the funding request development, to seek their input. In some countries, a grant-making status update has been instituted as a standing agenda item for CCM meetings. This allows community and civil society representatives to question the PR on progress and any other specific issues that might emerge. Civil society organizations that are not members of the CCM can request observer status for these meetings to gain an understanding of the process and provide input as needed through their representatives on the CCM.

In addition to working with the civil society representatives on the CCM, interested organizations can contact the Global Fund Secretariat directly to provide input into the grant-making process. You may wish to make yourself available to meet the Country Team or FPMs when they are in country or write them to make them aware of your willingness to be involved. Finding solutions to problems is in their interest. If concerns raised by the TRP or GAC have not been adequately addressed, the proposal will be returned to the CCM and the project start date may be delayed. The country team and FPM names are available on the Global Fund web site. 16 The Community, Rights and Gender (CRG) Department at the Global Fund will also be able to provide support and technical assistance during the grant-making phase. 17

What can community and civil society do to have good outcomes during grant-making:

• Convene a meeting of participants involved in the funding request development and set up a taskforce or working group to manage grant-making oversight.
• Review TRP recommendations and develop appropriate project activities based on normative guidance (see Annex D for links to WHO, UNAIDS program planning tools).
• Meet Fund Portfolio Manager (FPM) or Country Team lead when they are in country to get an update. Offer support to address feedback from TRP.
• Review work plan and budget – if important activities planned in the funding request do not appear in the budget and work plan they will not happen.
• Monitor Principal Recipient (PR) and Sub Recipient (SR) selection
• Request technical assistance and support in grant-making from Community Rights and Gender (CRG) department at the Global Fund.

In the case of the selection of a new PR or when a PR is working in a new area, the Secretariat will conduct a capacity assessment to confirm that the PR or a major SR has the requisite capacity. A new implementer will be identified or mitigation plans will be developed if problems are identified.

Once the implementation arrangements map, detailed budget template, performance framework, list of health products, capacity assessment tool (for new PRs and key implementers only), and grant agreement have been finalized, the PR submits these documents to the Secretariat for GAC review. There is no formal requirement for the CCM to sign off on the documentation before the PR submits them to the GAC, but CCMs ideally will be conducting oversight of the grant-making process as part of good governance. The GAC review will often recommend the proposed grant for Board approval, or in rare cases may refer it back to the TRP if they think the changes made during the grant-making process have significantly changed the program originally recommended by the TRP. Occasionally, they may send the grant documentation back to the country for revision. The GAC will also decide whether any of the unfunded elements from the funding request should be added to the Register of Unfunded Quality Demand. Following GAC review, the Secretariat submits a completed grant, with a final budget and associated performance indicators and work plan to the Global Fund’s Board for approval. This package will also include the Technical Review Panel’s comments on the funding request. Following Board approval, the CCM and the PR co-sign a grant agreement with the Global Fund and money is disbursed to Principal Recipient(s).

The key questions that communities and civil society should focus on during the grant-making phase are summarized in the checklist in Appendix B. A list of agencies and technical assistance providers willing to support communities and civil society during the grant-making stage is in Appendix C. Additional documentation on the grant-making process and helpful resource material is in Appendix D.

---

18 Countries are given funding ceilings but are also encouraged to develop funding requests that show the full expression of what is needed to address the three diseases. As noted in the text, quality, unfunded programming that is endorsed by the TRP and GAC is included in a Register of Unfunded Quality Demand for possible funding by other donors or if additional money becomes available. You can view the list here: [http://www.theglobalfund.org/en/uqd/](http://www.theglobalfund.org/en/uqd/).
Appendix A: Key Steps in the Grant-making Process

<table>
<thead>
<tr>
<th>Grant-making Activities</th>
<th>Community and Civil Society Role</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Performance Framework and M&amp;E plan</strong></td>
<td>These documents specify baseline, performance targets, indicators, and measurement methodologies.</td>
</tr>
<tr>
<td>The performance framework usually follows the work plan and budget. However, if the targets specified in the funding request are not included in the performance template, community and civil society representatives can raise this concern with the CCM.</td>
<td></td>
</tr>
<tr>
<td><strong>List of Health Products</strong></td>
<td>The list of health products is developed during the funding requests development phase. During grant-making, the list will be reviewed in more detail and updated.</td>
</tr>
<tr>
<td>Community and civil society representatives may have limited involvement in developing the list of health products, unless they have been advocating during the funding request development phase to introduce newer drugs or diagnostics.</td>
<td></td>
</tr>
<tr>
<td><strong>Detailed and Summary Budget</strong></td>
<td>The work plan includes grant implementation milestones and specific actions to address capacity gaps and to tackle any risks identified. The budget provides a costing for all project inputs and activities.</td>
</tr>
<tr>
<td>The most important documents to be reviewed are the detailed work plan and budget. The work plan is developed by the PR, often with input from technical partners. Community and civil society representatives should review the work plan to ensure activities planned in the funding request are included and review the budget to confirm that sufficient money is allocated to these activities.</td>
<td></td>
</tr>
<tr>
<td><strong>Assessment of (Key) Implementer(s)</strong></td>
<td>A capacity assessment may be required to determine if the nominated PR meets the minimum standards to manage the proposed grant including: monitoring and evaluation, procurement and supply chain management, financial management, and program management, including SR management.</td>
</tr>
<tr>
<td>The results of the capacity assessment should be reviewed to ensure that the assessment is accurate and reflects the intent of the funding request. When a PR is found lacking in a specific area, the Global Fund can request technical support or recommend subcontracting grant implementation tasks, such as procurement activities, to a third party.</td>
<td></td>
</tr>
</tbody>
</table>

Implementation Arrangements Map
The implementation arrangements map specifies all of the participants identified in the grant (PRs, SRs, and SSRs). Their roles, responsibilities, and funding levels are specified.

Community and civil society representatives should review implementation arrangements in detail to ensure that programming arrangements match the plans articulated in the funding request and should monitor any changes in the choice of PR and the SR selection process.

Programmatic Gap and Funding Landscape Table
The programmatic gap and funding landscape table is developed during the funding request development phase. During grant-making this document is reviewed in more detail and updated.

If new information becomes available about incidents affecting a particular population or group, community and civil society representatives should bring this to the CCM’s attention so that the gap analysis can be updated and programming adjusted to reflect these new data.

Applicant Response Form
Here, the applicant describes how they have addressed any comments or issues raised by the TRP/GAC in the Funding Request Review and Recommendation Form.

The Applicant Response Form reports on how all the comments from the TRP and GAC have been addressed in the grant-making process. The form should be reviewed to make sure all concerns relevant to community, rights, and gender have been adequately addressed.
Appendix B: Grant-making Checklist

Questions to verify during the grant-making process

- Are the focus areas specified in the funding request still included in the work plan?
- Does the budget include all the interventions suggested in the funding request?
- Was the PR recommended in the funding request maintained? Are there any capacity development needs identified? Are the right SRs and SSRs identified?
- Are all the comments and recommendations by the TRP and GAC addressed?

Information Source

- Review work plan and performance framework.
- Review the budget and work plan to ensure that interventions are fully costed and included in the grant.
- Review the capacity assessment tool and the implementation mapping report.
- Review the Applicant Response Form, which summarizes how the grant has addressed recommendations and comments from TRP and GAC.

Action to Take

- If the focus areas have changed from those specified in the funding request, find out why. Ask the CCM or the Global Fund Secretariat. Some changes may be relevant and based on input from the TRP or GAC, but it is important to find out why the changes have been made and evaluate whether they are acceptable.
- If activities are omitted, this should be raised with civil society representatives on the CCM. If funding levels are too low, technical support should be sought to provide more accurate costing (see technical support providers, Appendix C).
- If the PR and SR arrangements defined in the implementation mapping report are not in line with the intent of the funding request, this should be raised with the CCM.
- The TRP and GAC reports often make specific reference to community and civil society concerns. If these have not been adequately addressed in the grant-making process, this should be raised with the CCM, FPM, or country team.
## Appendix C: Agencies and Technical Assistance that Can Support Civil Society During the Grant-making Stage

<table>
<thead>
<tr>
<th>Type of Technical Cooperation</th>
<th>Type of Support and Request Channel</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Bilateral Technical Providers</strong></td>
<td>The <em>United States government</em> provides technical support in the areas of prevention, care, and treatment for the three diseases, as well as for health systems strengthening. To request assistance, contact the US government representative on your Country Coordinating Mechanism.</td>
</tr>
</tbody>
</table>

*Expertise France* is the French international agency for technical expertise. There are four primary ways it operates to provide support:

- Bilateral cooperation with a partner agency or country
- Direct donor funding through a call for tender
- European twinning projects
- European Union-delegated management contracts

*BACKUP Health* is a global program funded by the German Federal Ministry for Economic Cooperation and Development (BMZ). In its current phase, BACKUP provides short- and long-term support in three areas:

- Governance of Country Coordinating Mechanisms for Global Fund programs and their coordination in the health sector
- Use of Global Fund grants for strengthening health systems
- Management capacities of Global Fund recipients

---

### World Health Organization

Technical support includes the development of technically sound funding applications, action plans during grant-making, setting performance targets, responding to Technical Review Panel requirements, as well as support during implementation and addressing potential bottlenecks. This support can be provided in various ways, including directly by WHO staff, or by expert consultants through remote support, in-country missions, training workshops, or facilitated peer reviews. Request for support should be made through your WHO country office.

### UNAIDS

Technical Support Facilities operating in Asia Pacific, Eastern and Southern Africa, and West and Central Africa function as core platforms for providing vital technical support to Global Fund grantees in the regions, most heavily affected by the HIV and AIDS epidemic. In all other regions, UNAIDS provides technical assistance through the UNAIDS Regional Support Teams and/or directly through UNAIDS Country Offices. This support is provided either directly by UNAIDS staff or through a network of quality-assured technical support providers. All request for technical support should be channeled through the UNAIDS country office.

### STOP TB Partnership

With its initiatives such as TB REACH and the Global Drug Facility, is a source of technical support and collaboration in areas related to the TB response. Support ranges from community systems strengthening and high-level advocacy to improving case detection, finding missing cases and rapid uptake of new TB medicines and regimens. It also provides support for capacity strengthening in establishing systems for forecasting, quantification, supply planning and early warning.

### Roll Back Malaria

Support Partner Committee (formerly the Harmonization Working Group) coordinates technical support to countries. Provided through consultants and partners, the support aids in funding request completion, including convening orientation meetings and simulating Technical Review Panels for peer review of funding requests, as well as expert review of near-final submissions. Support is tailored to country-specific needs, but may include support for the finalization of gap analyses and epidemiological mapping as well as assisting in completion of Global Fund templates, frameworks and budgets. In some cases, support for in-country consultative processes during the development of funding requests is available. Send requests to technicalsupport@rbm.org.

### Community, Rights and Gender Technical Assistance

Community, Rights and Gender Technical Assistance is the Global Fund Board-approved strategic initiative that provides technical assistance to support the engagement of civil society, key populations, and people living with or affected by the three diseases to ensure people affected by them play a meaningful role in Global Fund processes and that human rights and gender barriers are effectively addressed in grants. Send requests to crgta@theglobalfund.org.

Technical Briefs

The following documents can be downloaded from the “Applicant Resources” tab at
https://www.theglobalfund.org/en/applying/funding/resources/:

- Addressing Gender Inequalities and Strengthening Responses for Women and Girls
- Addressing Sex Workers, Men who have Sex with Men, Transgender People, People who Use Drugs, and People in Prison and Other Closed Settings in the Context of the HIV Epidemic
- Adolescent Girls and Young Women in High-HIV Burden Settings
- A Toolkit for Health Facilities: Differentiated Care for HIV and Tuberculosis
- Harm Reduction for People who Use Drugs
- Malaria Case Management in the Private Sector
- Malaria, Gender and Human Rights
- Maximizing Impact by Strengthening Community Systems and Responses
- Strategic Investments for Adolescents in HIV, Tuberculosis and Malaria Programs
- Strategic Support for Human Resources for Health
- Strategic Support for Integrated Laboratory Services
- Strengthening Sexual, Reproductive, Maternal, Newborn, Child and Adolescent Health in Funding Requests to the Global Fund
- Sustainability, Transition and Co-financing of Programs
- Operational Research to Improve Implementation and Uptake of HIV Self-testing
- Use of a Private Sector Co-payment Mechanism to Improve Access to ACTs

E-learning courses

iLearn is the Global Fund’s online learning platform. It offers online training resources for applicants, partners, civil society, and others interested in learning about topics such as HIV, tuberculosis, malaria, the Global Fund’s funding model, and funding application and implementation processes. Apply to access the material at https://www.theglobalfund.org/en/ilearn/.
